

STORAGE DEVICE FASTENING APPARATUS

Abstract

A storage device fastening apparatus for fastening a storage device inside a casing. The storage device has a plurality of first holes. The storage device fastening apparatus includes a frame installed inside the casing for supporting the storage device and has a plurality of second holes and a second hook. A fastening base is detachably installed on the frame and has a plurality of bumps for insertion through the second holes into the first holes for affixing the storage device. A sliding portion, having a first hook, is movably installed on the fastening base for affixing the fastening base to the frame. When the sliding portion resides at a first fixed position, the first hook is separated from the second hook. When the sliding portion resides at a second fixed position, the first hook and the second hook are engaged to affix the fastening base to the frame.
